DHINGRA, RAKESH KUMAR

ART UNIT	PAPER NUMBER
----------	--------------

1763

DATE MAILED: 10/04/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.		Applicant(s)	
	10/600,273		GAO ET AL.	
	Examiner		Art Unit	
	Rakesh K. Dhingra		1763	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 July 2005.
- 2a) ☒ This action is FINAL. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-24 is/are pending in the application.
- 4a) Of the above claim(s) 12-20 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-11 and 21-24 is/are rejected.
- 7) ☒ Claim(s) 1, 8 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

FINAL ACTION

Election/Restrictions

Applicant's election of invention of Group I, Claims 1-11 in the reply filed on 7/27/05 is acknowledged. Because applicant did not distinctly and specifically point out the reasons for traverse, the election has been treated as an election without traverse (MPEP § 818.03(a)).

The requirement for restriction is still deemed proper and is therefore made FINAL.

Claim Objections

1) Claim 1 objected to because of the following informalities:

In last paragraph recited as "inner and outer zone bleed lines ----- for pressure release" it is suggested as given below -

a) In line 2 replace "lines between" with "lines respectively between", and

b) In line 3 replace "zone feed line" with "zone bleed line". For the purpose of the following examination on the merits this part of the claim has been interpreted as "zone bleed line".

2) Claim 8 objected to because of the following informalities:

In paragraph 5 recited as "first and second zone bleed lines ----- for pressure release" it is suggested as given below -

a) In line 2 replace "lines between" with "lines respectively between", and

Appropriate correction is required.

Claim Rejections - 35 USC § 103

Art Unit: 1763

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-6, 21, 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shamouilian et al (US Patent No. 6,320,736) in view of Felts (US Patent No. 6,015,595).

Regarding Claim 1: Shamouilian et al teach a multiple zone gas distribution apparatus (Figures 1-5) for controlling temperature across a workpiece during processing, the apparatus comprising:

a chuck 28 having a top face 27 configured to hold a substrate (work piece) 4 during processing, the chuck top face defining inner and outer zones 56a, 56c between the top face of the chuck and the workpiece into which zone coolant gas may be admitted;

Art Unit: 1763

inner and outer zone feed lines 50b, 50a for feeding the coolant gas to the

inner and outer zones of the chuck;

a pressure and flow control system 55 (Pressure Sensors 64a, 64, Flow controllers 62a, 62b and Pressure Control Valves 66a, 66b) for supplying zone coolant gas to the feed lines with separate pressures for the inner and outer zones controlled to control the temperature across the workpiece;

and inner and outer zone bypass (bleed) lines (with bypass valves 76b, 76a) connected to the inner and outer zone feed lines between the pressure and flow control system and the chuck; the inner zone bleed line having a connecting line in fluid communication with the outer zone bleed line and an orifice (valve) 76b adapted to continuously bleed the pressure of the inner zone and the outer zone bleed line having an evacuation valve 76a for pressure release (Column 4, line 10 to Column 5, line 15 and Column 7, lines 19-42).

Shamouilian et al do not teach that the orifice (valve) 76b is a fixed orifice.

Felts teaches a plasma apparatus (Figures 1) in which valve 49 can be replaced with fixed orifice to provide predetermined flow of process gas (Column 6, lines 3-7).

Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to replace bypass valve in the inner zone bleed line with a fixed orifice as taught by Felts in the apparatus of Shamouilian et al to provide predetermined flow of gas.

Regarding Claim 2: Shamouilian et al teach that outer zone bleed line has a bypass (evacuation) valve 76a that can be adapted to be closed during workpiece processing

Art Unit: 1763

and during that time the pressure bleeds between the chuck and the workpiece to the surrounding chamber.

Per Case Law: "A claim containing a "recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus" if the prior art apparatus teaches all the structural limitations of the claim. *Ex parte Masham*, 2 USPQ2d 1647 (Bd. Pat. App. & Inter. 1987)."

Also per Case Law: "Claims directed to apparatus must be distinguished from the prior art in terms of structure rather than function. *In re Danly*, 263 F.2d 844, 847, 120 USPQ 528, 531 (CCPA 1959). Apparatus claims cover what a device is, not what a device does *Hewlett-Packard Co. V. Bausch & Lomb Inc.*, 15USPQ2d 1525, 1528 (Fed. Cir. 1990)".

Regarding Claims 3, 4: Shamouilian et al teach that the inner and outer zones 56a, 56c are concentric circular zones with plurality of holes 40a, 40b arranged on circular pattern for delivery of coolant gas (Figures 3, 7 and Column 6, lines 20-30 and Column 7, lines 45-60).

Regarding Claim 5: Shamouilian et al teach that the inner and outer zones of the chuck top face include at least one shallow circular groove (between protrusions 44) to provide easy flow of coolant gas from the plurality of holes in a circular direction along the underside of the wafer (Figures 1, 2).

Regarding Claim 6: Shamouilian et al teach that the pressure and flow control system 55 is adapted to control the supply of zone coolant gas to the feed lines to achieve

Art Unit: 1763

different pressures in the inner and outer zones throughout the processing of a workpiece to control the temperature across the workpiece (Column 2, lines 9-12 and Column 7, lines 19-42).

Regarding Claim 21: Shamouilian et al in view of Felts teach that valve 76b (fixed orifice) is positioned along the connecting line (Figure 5).

Regarding Claim 22: Shamouilian et al teach that the inner zone bleed line is adapted to be bled via the connecting line and the outer zone bleed line (Figure 5).

Claims 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shamouilian et al (US Patent No. 6,320,736) in view of Felts (US Patent No. 6,015,595) as applied to Claim 1 above and further in view of Matsuda et al (US Patent No. 6,254,683).

Regarding Claim 7: Shamouilian in view of Felts teach all limitations of the claim but do not teach that inner zone bleed line evacuation valve is adapted to by-pass the fixed orifice for immediate inner zone evacuation.

Matsuda et al teach an apparatus (Figure 1) that has an evacuation line 19 with a cut-off valve 41 and a by-pass line 17a with valve 43 to enable faster evacuation and improve throughput (Column 7, lines 12-19 and Column 6, lines 50-65) and that the by-pass line 17b provides an additional path for evacuation. Matsuda et al further teach that in this apparatus two or more lines for heat conductive gas (for inner and outer zones) may be used (Column 7, lines 45-48) as required for process. Evacuation time of 5 seconds or less is process limitation and the disclosed apparatus is capable of being operated under conditions claimed by adjusting by-pass valves.

Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to use evacuations valves in the inner zone bleed line as taught by Matsuda et al in the apparatus of Shamouilian et al in view of Felts to obtain improved throughput.

Claims 8 –11, 23, 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shamouilian et al (US Patent No. 6,320,736) in view of Felts (US Patent No. 6,015,595) as applied to Claim 1 and further in view of Ito et al (JP 10163308 A).

Regarding Claim 8: Shamouilian et al in view of Felts teach all limitations of the claim (as already explained under Claim 1) except for pressure and flow control system providing a signal indicating de-chucking.

Ito et al teach an apparatus (Figure 1-3) that has a Controller 18 that facilitates release of wafer 7 by using a set value, which is reaction difference between electrostatic attraction and backside pressure of Helium (Abstract).

Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to use the pressure signal from the pressure controller as taught by Ito et al in the apparatus of Shamouilian et al in view of Felts to facilitate release (de-chucking) of wafer.

Regarding Claims 9, 10: Shamouilian et al teach that the first and second (inner and outer zones) 56a, 56c are concentric circular zones with plurality of holes 40a, 40b arranged on circular pattern for delivery of coolant gas (Figures 3, 7 and Column 6, lines 20-30 and Column 7, lines 45-60).

Art Unit: 1763

Regarding Claim 11: Shamouilian et al teach that the second (outer) zone bleed line has a bypass (evacuation) valve 76a that can be adapted to be closed and during that time the pressure bleeds between the chuck and the workpiece to the surrounding chamber.

Per Case Law: "A claim containing a "recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus" if the prior art apparatus teaches all the structural limitations of the claim. *Ex parte Masham*, 2 USPQ2d 1647 (Bd. Pat. App. & Inter. 1987)."

Also per Case Law: "Claims directed to apparatus must be distinguished from the prior art in terms of structure rather than function. *In re Danly*, 263 F.2d 844, 847, 120 USPQ 528, 531 (CCPA 1959). Apparatus claims cover what a device is, not what a device does *Hewlett-Packard Co. V. Bausch & Lomb Inc.*, 15USPQ2d 1525, 1528 (Fed. Cir. 1990)".

Regarding Claim 23: Shamouilian et al in view of Felts teach that valve 76b (fixed orifice) is positioned along the connecting line (Figure 5).

Regarding Claim 24: Shamouilian et al teach that the first (inner) zone bleed line is adapted to be bled via the connecting line and the second (outer) zone bleed line (Figure 5).

Response to Arguments

Applicant's arguments filed on 7/27/05 with respect to claims 1-11 have been considered but are moot in view of the new ground of rejection. Applicant has added

Art Unit: 1763

"connecting line in fluid communication with the outer zone bleed line" has been added by amending the Claims 1,8 for which new reference by Shamouilian et al (US Patent No. 6,320,736) has been found and that reads on this limitation. Accordingly claims 1-11 and 21-24 have been rejected as explained above.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a). A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rakesh K. Dhingra whose telephone number is (571)-272-5959. The examiner can normally be reached on 8:30 -6:00 (Monday - Friday).

Art Unit: 1763

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Parviz Hassanzadeh can be reached on (571)-272-1435. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
